RE: Letter of Commitment toward FPUA project proposal to the Grid Resilience and Innovation Partnership Program

Dear Ms. Wilson,

I am writing this letter on behalf of ILJIN Electric USA, Inc. to extend our full support and commitment toward the FPUA project proposal, *Mitigating Impacts of Extreme Weather and Natural Disasters through Increased Grid Resiliency.* If the project is approved, we will be contracted to supply materials and labor.

ILJIN has supported FPUA in the past on project activities such as the ones proposed here. Specifically, we have supplied the two auto-transformers for FPUA at the Hartman substation. Established in January 1967, we are specialists in this line of work and proudly contribute to the expertise at FPUA.

The proposed project activities, to supply the upgrade of FPUA's existing transformers from 100 MVA to 120 MVA, is fully attainable within the timeline provided and will greatly contribute to the resiliency of this electric grid.

Thank you for your consideration. We grateful for the opportunity to work with FPUA toward improving the resiliency of the electric grid in Fort Pierce, Florida.

Sincerely,

On behalf of ILJIN Electric USA,
Jim Cooke, President
