RE: Letter of Commitment toward FPUA project proposal to the Grid Resilience and Innovation Partnership Program

Dear Ms. Wilson,

I am writing this letter on behalf of S&C Electric Company to extend our full support and commitment toward the FPUA project proposal, *Mitigating Impacts of Extreme Weather and Natural Disasters through Increased Grid Resiliency.* If the project is approved, we will be contracted to supply materials.

S&C Electric Company has worked extensively with FPUA in the past on project activities such as the ones proposed here. Specifically, we have supplied over 150 TripSaver II reclosers to FPUA in the recent years. Established in 1911, we are specialists in this line of work and proudly contribute to the expertise at FPUA. Additionally, S&C Electric Company will provide training and technical support resources to help enable a successful roll out of the project.

The proposed project activity, to supply 400 TripSaver II reclosers, is fully attainable within the timeline provided and will greatly contribute to the resiliency of this electric grid. At S&C Electric Company, we recognize that power resiliency and reliability are critical factors for the power industry. We see this project as an opportunity to demonstrate our commitment to supporting growth and innovation in the industry that will ultimately improve our nation's power grids.

Thank you for your consideration. We grateful for the opportunity to work with FPUA toward improving the resiliency of the electric grid in Fort Pierce, Florida.

Sincerely,

Jordan Ehren
