# U.S. DEPARTMENT OF ENERGY OFFICE OF ENERGY EFFICIENCY AND RENEWABLE ENERGY NEPA DETERMINATION

A AT NOT A
STATES

## RECIPIENT: Optimus Ride Inc. STATE: MA PROJECT TITLE : Scaling Automated Connected-Electric-Shared (ACES) Fleets: Achieving Energy Efficiency, Decarbonization, and Social Equity Goals Procurement Instrument Number Funding Opportunity Announcement Number DE-FOA-0002420 NEPA Control Number CID Number Based on my review of the information concerning the proposed action, as NEPA Compliance Officer (authorized under DOE Policy 451.1), I have made the following determination: CX. EA. EIS APPENDIX AND NUMBER: Description Information gathering (including, but not limited to, literature surveys, inventories, site visits, and audits), data analysis (including, but not limited to, computer modeling), document preparation (including, but not limited to, computer modeling), document publication and distribution, and classroom training and informational programs), but not including site characterization or environmental monitoring. (See also B3.1 of appendix B to this A9 Information gathering, analysis, and dissemination ubpart.) Sting, construction, modification, operation, and decommissioning of facilities for smallscale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale plot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category and demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial deployment. B3.6 Small-scale research and development, laboratory operations, and pilot projects (a) Actions to conserve energy or water, demonstrate potential energy or water conservation, and promote energy efficiency that would not have the potential to cause significant changes in the indoor or outdoor concentrations of potentially harmful substances. These actions may involve financial and technical assistance to individuals (such as builders, owners, consultants, manufacturers, and designers), organizations (such as utilities), and governments (such as state, local, and tribal). Covered actions include, but are not limited to weatherization (such as insulation and replacing windows and doors); programmed lowering of thermostat settings; placement of timers on hot water heaters; installation or replacement of energy efficiency yand publice efficiency manufactory ratings; efficiency manufactory ratings; efficiency manufactory ratings; efficiency manufactor ratings; efficiency manufactory ratings; efficiency importantes in generative efficiency and applicate efficiency manufactory ratings; efficiency manufactory ratings; efficiency importantes and responses in conditioning systems, car navigation, speed cameras, and automatic plate number accentions) in the intervention of a system (and and respective). B5.1 Actions to conserve energy or water generary less than to megawatt equivalent); transportation management systems (such as traine signal control systems, car navigation, speed cameras, and automatic parte number recognition); development of energy-efficient manufacturing, industrial, or building practices; and small-scale energy efficiency and conservation research and development and small-scale plot projects. Covered actions include building renovations or new structures, provided that they occur in a previously disturbed or developed area. Covered actions could involve commercial, residential, agricultural, academic, institutional, or industrial sectors. Covered actions do not include rulemakings, standard-settings, or proposed DDE legislation, except for those actions listed in B5.1(b) of this appendix. (b) Covered actions include rulemakings that establish energy conservation standards for consumer products and industrial equipment, provided that the actions would not: (1) have the potential to cause a significant change in manufacturing infrastructure (such as construction of new manufacturing plants with considerable associated ground disturbance). (2) incrince different unrecented ameliate conserving in organ conserver proved to an energy in manufacturing infrastructures (such as construction of new manufacturing plants with considerable associated ground in B5.1(b) of th would not: (1) disturbance); (2) involve significant unesolved confinite concerning alternative uses of available resolution of new materials time considerable associated ground disturbance); (2) involve significant unesolved confinite alternative uses of available resolutions (such as rare or limited raw materials); (3) have the potential to cause a significant increase interdease in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potential to cause a significant increase increase in the disposal of materials posing significant risks to human health and the environment (such as RCRA hazardous wastes); or (4) have the potenti ergy consumption in a state or region.

Rationale for determination:

#### NEPA PROVISION

DOE has made a final NEPA determination.

Notes:

#### A general note: If it is determined that charging stations will be needed/installed, provide the details of the site locations to determine the appropriate NEPA review.

#### FOR CATEGORICAL EXCLUSION DETERMINATIONS

The proposed action (or the part of the proposal defined in the Rationale above) fits within a class of actions that is listed in Appendix A or B to 10 CFR Part 1021, Subpart D. To fit within the classes of actions listed in 10 CFR Part 1021, Subpart D, Appendix B, a proposal must be one that would not: (1) threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of DOE or Executive Orders; (2) require sing and construction or major expansion of wast sorrage, disposal, recovery, or treatment facilities (including incinentaries (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, recovery, or treatment facilities (including incinentaries), but the proposal may include categorically excluded wast sorage, disposal, and intervention of the proposal may including, but not limited to, those fisted in paragraph B(4) of 10 CFR Part 1021, Subpart D, Appendix B; (5) involve genetically engineered organisms, synthetic biology, governmentally designated noxious weeds, or invasive species, unlexis the proposed activity would be contained or confined in amanner designed and operated to prevent

There are no extraordinary circumstances related to the proposed action that may affect the significance of the environmental effects of the proposal.

The proposed action has not been segmented to meet the definition of a categorical exclusion. This proposal is not connected to other actions with potentially significant impacts (40 CFR 1508.25(a)(1)), is not related to other actions with individually insignificant but cumulatively significant impacts (40 CFR 1508.27(b)(7)), and is not preduded by 40 CFR 1506.1 or 10 CFR 1021.211 concerning limitations on actions during preparation of an environmental impact statement.

The proposed action is categorically excluded from further NEPA review.

#### SIGNATURE OF THIS MEMORANDUM CONSTITUTES A RECORD OF THIS DECISION.
