GLYCOSURF

DEVELOPMENT OF LIGAND-ASSOCIATED SOLID-LIQUID EXTRACTION MEDIA SYSTEM FOR SEPARATION OF HIGH PURITY INDIVIDUAL RARE EARTH ELEMENTS FROM COAL-BASED RESOURCES

Chett Boxley (GlycoSurf) & Tim Dittrich (Wayne State U.)

Contract number: DE-SC0021702

U.S. Department of Energy National Energy Technology Laboratory Resource Sustainability Project Review Meeting October 25 - 27, 2022

© 2022 GlycoSurf, Inc.

Contract: SC0021702 <u>STTR Phase 1 (Complete)</u> Project Funding: \$256,497 (DOE share) Project Timeline: 06/28/21 – 06/27/22

STTR Phase 2

Project Funding: \$1,629,853 (DOE share) Project Timeline: 08/28/22 – 08/21/24

Project Partners

Dr. Timothy Dittrich Assistant Prof. Civil & Environmental Eng.

Dr. Sanjay Mohanty Assistant Prof. Civil & Environmental Eng.

Current Focus Areas

www.glycosurf.com

Inspired By Nature

OVERALL APPROACH: — SOLID SUPPORTED LIGANDS

Overarching Project Goals:

- Synthesis of novel separation ligands
- Modeling of REE-ligand binding
- Ligand-bound resin production and optimization
- Selective extraction testing using REO model concentrates

www.glycosurf.com

Inspired By Nature

BIOSYNTHETIC RHAMNOLIPIDS

TRADITIONAL BIOSURFACTANTS

- Produced by bacteria
- Complex mixtures
- Batch-to-batch variability
- Low purity of crude product

www.glycosurf.com

Inspired By Nature

APPROACH: LIGAND DEVELOPMENT

Tailored synthetic glycolipids

Tailored organic structures

Synthesized 2EtHex DTPA

3 additional novel structures being synthesized in Phase II

RESULTS: GLYCOLIPID SYNTHESIS

Traditional 3- Position Attachment ("normal" binding pocket)

- 100-gram batch syntheses
- Multiple syntheses completed and shipped to WSU
- Improving yields

0 0

- P-P'-di(ethylhexyl)methanediphosphonic acid (DIPEX) from Eichrom, LLC
- Synthesized ligands

Commercial ligands

- Diethylenetriaminepentaacetic acid (DTPA)
 - functionalized with hydrophobic groups
- Bis(ethylhexylamido) DTPA
 - EHNH₂ DTPA
- Glycolipids (numerous types)

SOLID SUPPORTS

- Styrene-divinylbenzene
- Organosilica
 - ~600 m²/g surface area

X 80

15.0kV SEI

SOLID SUPPORTS

1. Hovey, J. L.; Dardona, M.; Allen, M. J.; Dittrich, T. M. Sorption of Rare-Earth Elements onto a Ligand-Associated Media for pH-Dependent Extraction and Recovery of Critical Materials. Sep. Purif. Technol. 2021, 258, 118061.

OBJECTIVE 4: LAB-SCALE TESTING AND ANALYSIS

- Experimental parameters
 - Sorbent characterization
 - REE sorption and recovery
 - Effective pH range
 - Kinetics
 - Capacity
 - Selectivity

Ligand	Solid support
Rhamnolipid C14	Organosilica
Rhamnolipid C14 C14	Organosilica / Styrene-DVB
Rhamnolipid C18	Organosilica / Styrene-DVB
Galactolipid C14	Organosilica
Glucolipid C14	Organosilica / Styrene-DVB
Xylolipid C14	Organosilica / Styrene-DVB
Xylolipid C14 C14	Organosilica / Amberlite
Modified DTPA	Organosilica

SORBENT CHARACTERIZATION

□Tracing ligand penetration in solid

DTPA with fluorescent moiety

□Fixed in epoxy-polished

Images shows that

Ligand uniformly diffused

OBJECTIVE 4: LAB-SCALE TESTING (>90% ISHP REOs)

- Obj. 4a: Batch experiments (UCLA)
 - 5 ppm of 16 REEs (80ppm TREE)
 - pH dependency
 - Selectivity

2921

pH-DEPENDENT BINDING (GLYCOLIPIDS)

Rham C14 C14 Amberlite

SEQUENTIAL COLUMN SEPARATIONS

SC AND TH

□All REEs but Sc release in the first few pore volumes

□Sc released gradually

□Further pH decrease releases most of the Th

SEQUENTIAL COLUMN SEPARATIONS

- Influent solution had 5.8% of each element
- Basket 1 is 90% enriched in Sc (78% of total)
- Basket 2 is 88% enriched in Th (81% of total)
- Basket 3 is 56% enriched in La (21% of total)

(TREEs + Th)

Sc Y La Ce Pr Nd Sm Eu Gd Tb Dy Ho Er Tm Yb Lu Th

GATCH EXPERIMENT MODEL

- PHREEQC model (NIST 46.8):
 - La, Ce, Pr, and Nd are showing poor fit

BATCH EXPERIMENT MODEL

- **PHREEQC** model calibration:
 - The complexation constants of 4 of the 16 modeled elements were adjusted to better match

• **PHREEQC** calibrated model:

Calibrated Model

3.0

RHAMNOLIPID C14C14 COLUMN SEPARATION

O PHASE I RESULTS

- GlycoSurf synthesized many ligands that can be utilized in solid-liquid extraction of REEs
- Ligand-associated sorbent media can be used in columns for separation of REEs
- Batch experiments and modeling show selectivity based on binding energy and complexation constants
- pH-dependent binding ranges and selectivities have been measured for DTPA and various glycolipids
- Individually separated high purity (ISHP) solutions from mixed REE+Th solutions
 - Sc and Th ~90% purity with 80% yield
 - Other enriched fractions
- Calibrated transport model
 - Modified DTPA has more selectivity than unmodified DTPA
 - Model will enable scaling with fly ash concentrates and leachates
- Next Steps for Phase II
 - Calibrate model with rhamnolipid C14C14 for sequential column separation
 - Design process for concentrate leach solution

Task 2: Test Sequential separation technique Technical Objective 5: REE-Capture Component Scale-Up (GlycoSurf/WSU) Milestone 1: Target molecule synthesis scale up (GlycoSurf) Task 1: Glycolipid synthesis scale-up Task 2: DTPA derivative synthesis scale-up Milestone 2: Sorbent media synthesis scale-up (WSU)		
Technical Objective 5: REE-Capture Component Scale-Up (GlycoSurf/WSU) Image: Component Scale-Up (GlycoSurf) Milestone 1: Target molecule synthesis scale-up (GlycoSurf) Image: Component Scale-Up (GlycoSurf) Task 1: Glycolipid synthesis scale-up Image: Component Scale-up (GlycoSurf) Task 2: DTPA derivative synthesis scale-up Image: Component Scale-up (GlycoSurf) Milestone 2: Sorbent media synthesis scale-up (WSU) Image: Component Scale-up (WSU)		-
Milestone 1: Target molecule synthesis scale up (GlycoSurf) Image: Comparison of the synthesis scale-up Task 1: Glycolipid synthesis scale-up Image: Comparison of the synthesis scale-up Milestone 2: Sorbent media synthesis scale-up (WSU) Image: Comparison of the synthesis scale-up		
Task 1: Glycolipid synthesis scale-up		
Task 2: DTPA derivative synthesis scale-up Milestone 2: Sorbent media synthesis scale-up (WSU)		-
Milestone 2: Sorbent media synthesis scale-up (WSU)		-
Technical Objective 6: Pre-Pilot Scale Prototype Construction (WSU; UCLA)		
Milestone 1: Design prototype column separation system		T
Task 1: Select column, tubing, fittings		-
Task 2: Establish operating conditions (flow rate, etc.)		-
Milestone 2: Procure and Commission Prototype		
Milestone 3: Test sequential prototype system		
Task 1: Single unit operation		-
Task 2: Test multi-unit sustem (prep for field deployment)		-
Technical Objective 7: Beporting & Commercialization Efforts		
Milestone 1: Techno-economic analysis of ligand synthesis process (Burk Eng.)		
Milestone 2: Techno-economic analysis of pilot-scale recovery system (Burk Eng.)		
Milestone 3: Final Benort		

GlycoSurfTeam:

Dr. Chett J. Boxley (PI) Dr. Ryan Stolley – Lead Synthesis Chemist Bobby Bruggeman – Senior Chemist/Lab Manager

Wayne State University Team: Dr. Timothy Dittrich

UCLA Team: Dr. Sanjay Mohanty

<u>Consultants:</u> TEA – Burk Engineering Modeling – Dr. Jessica Johnston Patents/IP – David Fonda

GlycoSurf Responsibilities:

- Synthesis of all ligands developed
- Oversee modeling work with consultant
- Work directly with Burk Eng. for overall TEA
- Overall project management and report writing

Wayne State Responsibilities: Ligand attachment to solid supports

UCLA Responsibilities: Batch testing
