Overview

Problem: Safe geologic carbon storage requires well information, but data are siloes and disparate.

Solution:

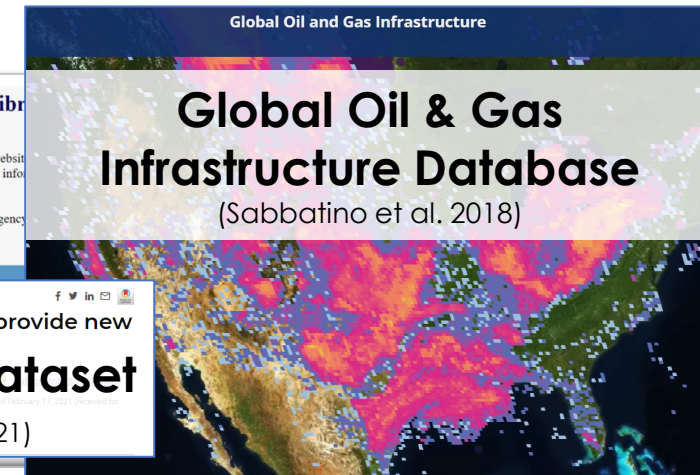

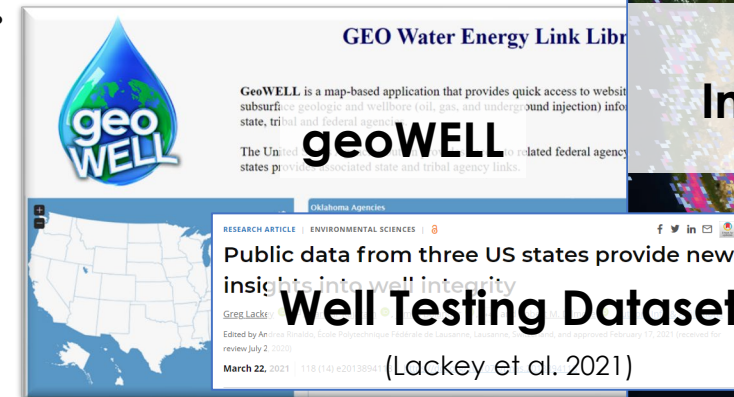

- Acquire & integrate wellbore data from across the country
- Perform analytics to highlight potential opportunities or risk (Dilmore et al. 2015; Glosser et al. 2016; Rose 2016)
- Automate methods to create a *dynamic database*
- Deliver data & insights through an intuitive web mapping tool

Values Delivered:

- Provide an up-to-date, national, integrated resource
- Support CS site selection and risk prevention
- Meets stakeholder request supporting CCS R&D

*Stakeholders include commercial and government entities.

Leverages NETL Technology & Resources:

Dilmore, R.M. et al., 2015. Spatial and temporal characteristics of historical oil and gas wells in Pennsylvania: Implications for new shale gas resources. *Environmental science & technology*, 49(20), pp.12015-12023.
Glosser, D. et al., 2016. "Spatio-Temporal Analysis to Constrain Uncertainty in Wellbore Datasets: An Adaptable Analytical Approach in Support of Science-Based Decision Making." *Journal of Sustainable Energy Engineering*, Vol. 3 (4), pp. 299-317.
Lackey, G. et al., 2021. Public data from three US states provide new insights into well integrity. *Proceedings of the National Academy of Sciences*, 118(14), p.e2013894118.

Building a National Well Database

Developing a Method to Support Dynamic Databases

Acquire

Data & metadata were pulled from a **subset** of public **state** and **federal** entities & NETL R&D papers

Public data from three US states provide new insights into well integrity
Well Testing Dataset
 (Lackey et al. 2021)

Process

Transform tabular data to spatial layers

Develop **attribute mapping schema** based on common attributes among datasets

Common Attributes & Definitions		Public Well Layers													
Field Names	Field Definitions	Well Test	New York	Alabama	Florida	Virginia	Washington	Utah	South Dakota	Texas	Alaska	HELD	West Virginia DEP	West Virginia	Dataset Coverage per field
Abstract Number	The abstract number for the surface location of the well.														1
Additional Documents	Indicates the availability of scanned documents pertaining to the permitted borehole, either geophysical logs or permit documents.														1
Alternate Well Name	The alternate name for a well, if any.														2
API UWI	The API (American Petroleum Institute) number is a unique oil and gas well identifier. API number is formatted to include a state identifier (2 digit), county identifier (3 digit), and unique well identifier (5 digit). The unique well identifier (UWI) is a unique number (up to 34 digits) that defines the bottom-hole location and each significant drilling or completion event in the well.	x	x	x	x	x	x	x	x	x	x	x	x	x	9
API UWI 12	The API (American Petroleum Institute) number is a unique oil and gas well identifier. API number is formatted to include a state identifier (2 digit), county identifier (3 digit), and unique well identifier (5 digit). The unique well identifier (UWI) is a unique number (up to 34 digits) that defines the bottom-hole location and each significant drilling or completion event in the well.														1
API UWI 12 Unformatted	API (American Petroleum Institute) unique well identifier (UWI) 12 with dashes and slashes removed.														1
API UWI 14	The API (American Petroleum Institute) number is a unique oil and gas well identifier. API number is formatted to include a state identifier (2 digit), county identifier (3 digit), and unique well identifier (5 digit). The unique well identifier (UWI) is a unique number (up to 34 digits) that defines the bottom-hole location and each significant drilling or completion event in the well.														2
API UWI 14 Unformatted	API (American Petroleum Institute) unique well identifier (UWI) 14 with dashes and slashes removed.														1
Ang Time Between CVP or SCP Tests	Average number of days between sustained casing pressure (SCP) or casing vent flow (CVF) tests.	x													1
Block	Block to which the well is located.														2
Best Analysis Date	The best date available for well installation. It is equivalent to the well spot date if available. If no spot date is available, the first production date was used. If no first production date or spot date were available, the completion date was used.	x													1
Bottom Hole Distance	Bottom-hole distance in feet from the closest drilling unit boundaries.														1
Bottom Hole Formation	The name of the bottom-hole formation or stratigraphic unit.														1
Bottom Hole Temperature	Temperature at the bottom of the well measured in degrees Fahrenheit.														1
Casing Base Formation	Estimated formation fluid pressure at the base of the surface casing (in pounds per square inch).														1

Integrate

Compile layers and attributes into a **uniform public wells dataset**

Publish

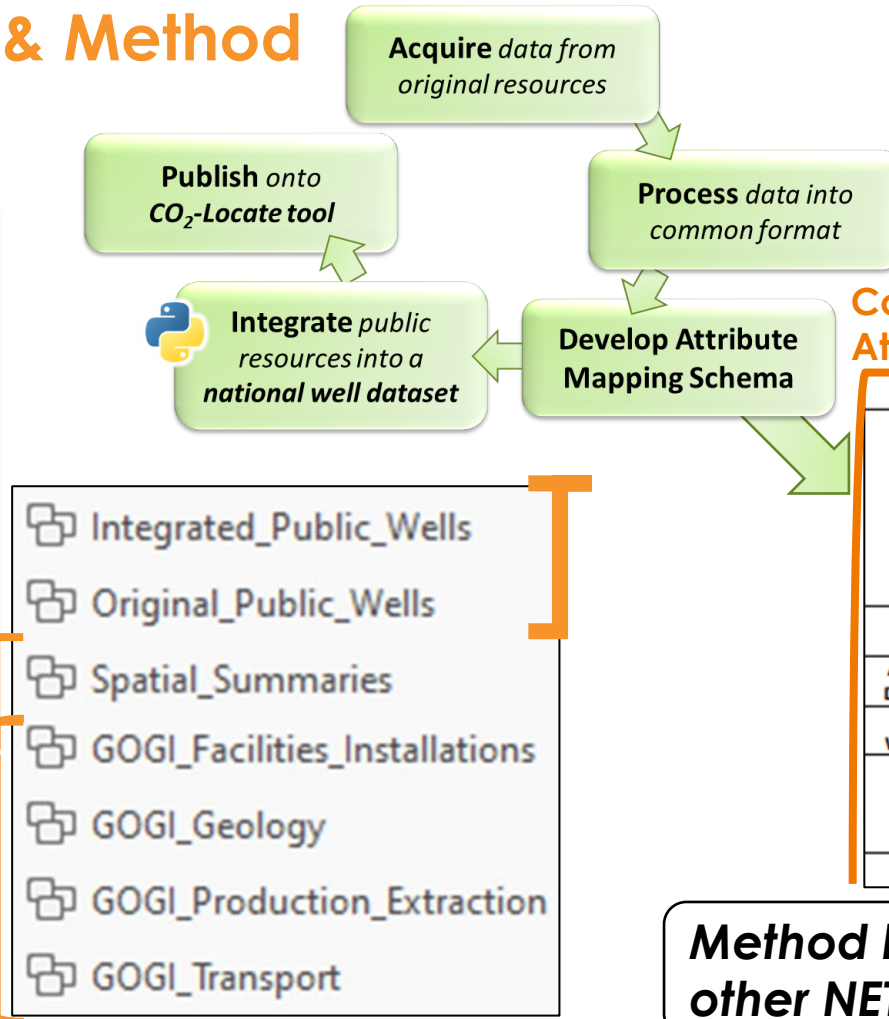

Romeo et al. 2023. **CO₂-Locate**.
<https://edx.netl.doe.gov/dataset/co2-locate>, DOI: 10.18141/1964068

CO₂-Locate (v1)

Database Highlights & Method

- **3.5+ million** well surface hole locations
- **11 credible sources**
- **Analytical spatial layers** developed with proprietary data
- Updated **Global Oil and Gas Infrastructure (GOGI)** U.S. data

100+ downloads

Developed **method** for integrating multiple, disparate datasets into **one resource**

Common Attributes

Original Public Resources

Field Names	Well Test	New York	Alabama	Florida	Virginia	Washington	Utah	South Dakota	Texas	Alaska	HIFLD	West Virginia DEP	West Virginia	Dataset Coverage per Field
Abstract Number									x					1
Additional Documents						x								1
Alternate Well Name						x							x	2
API UWI	x			x		x	x	x		x	x	x	x	9

Method being adapted for other NETL projects:

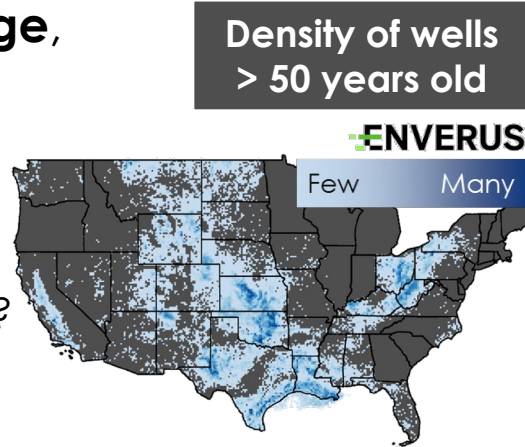

Additional Features of CO₂-Locate

Leveraging NETL R&D and Technologies

- **High-level analytics** of wells by **age**, **total vertical depth**, and **status**

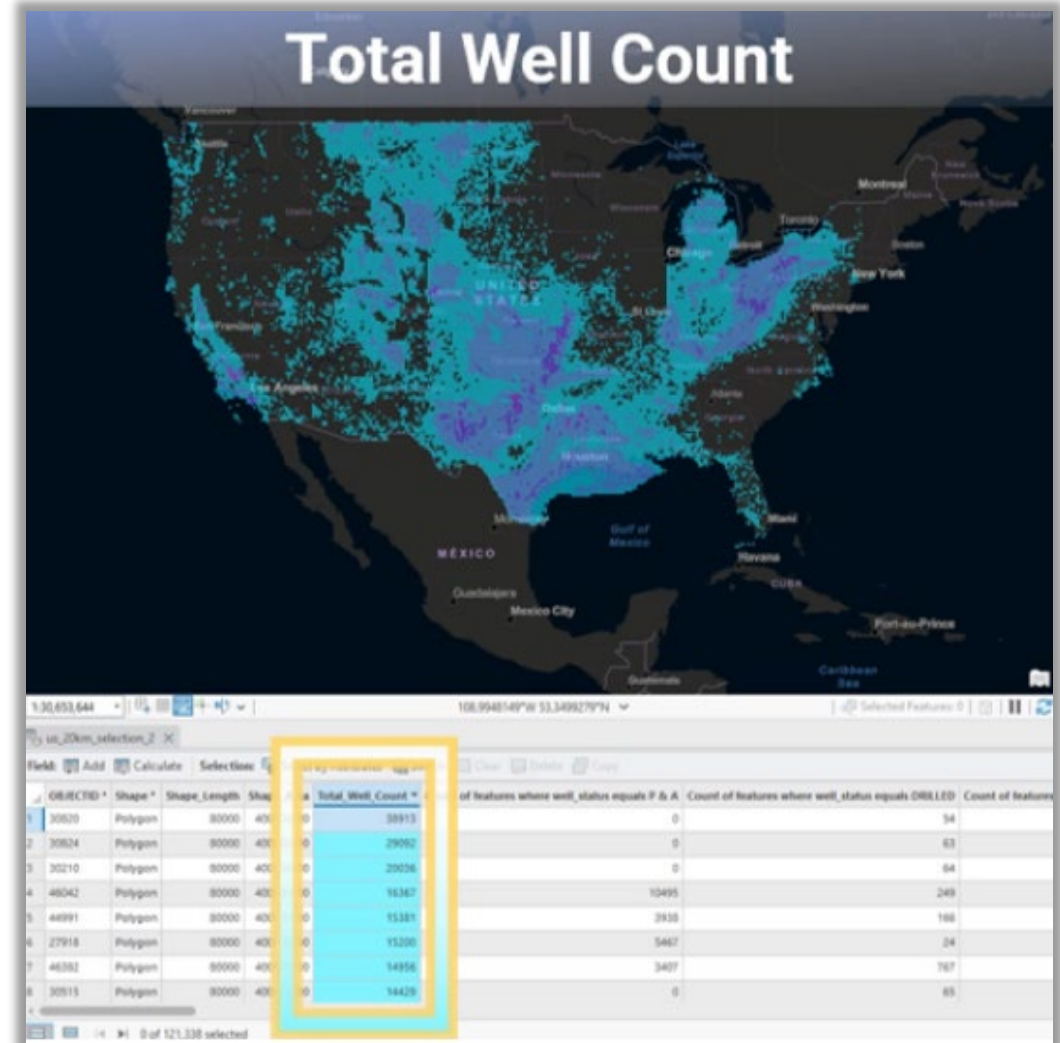

- *Where are concentrations of old wells at multiple depths?*
- *Where are younger, active wells?*

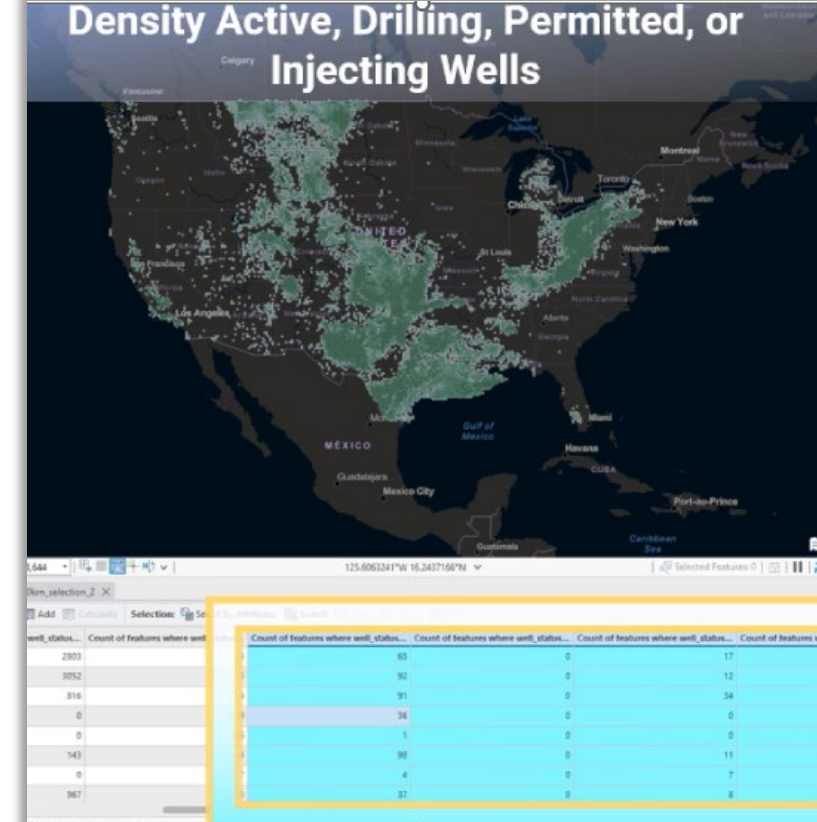

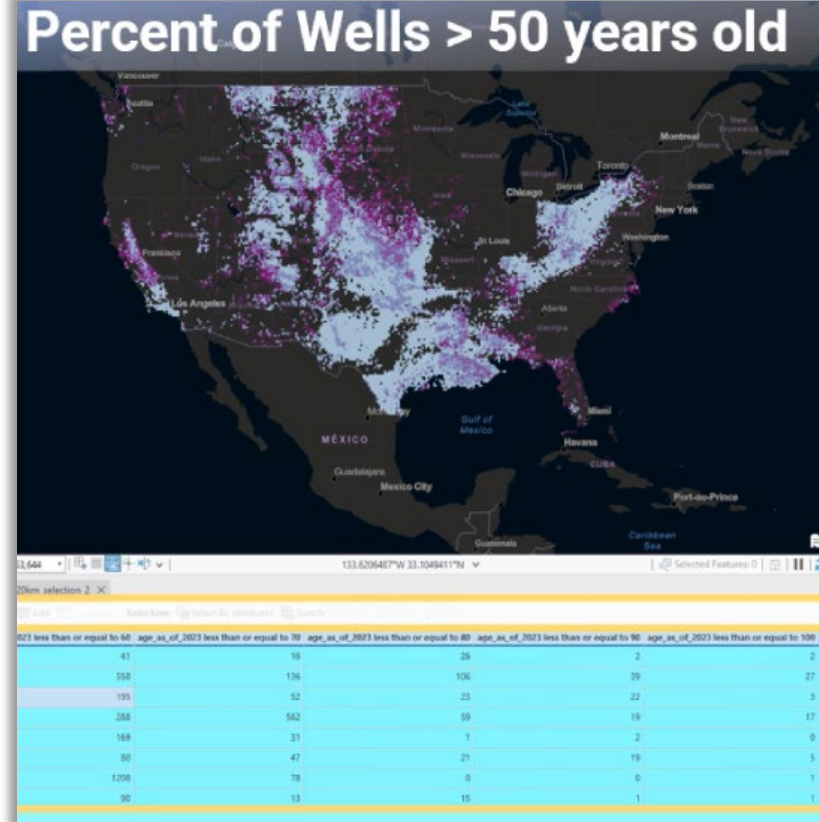

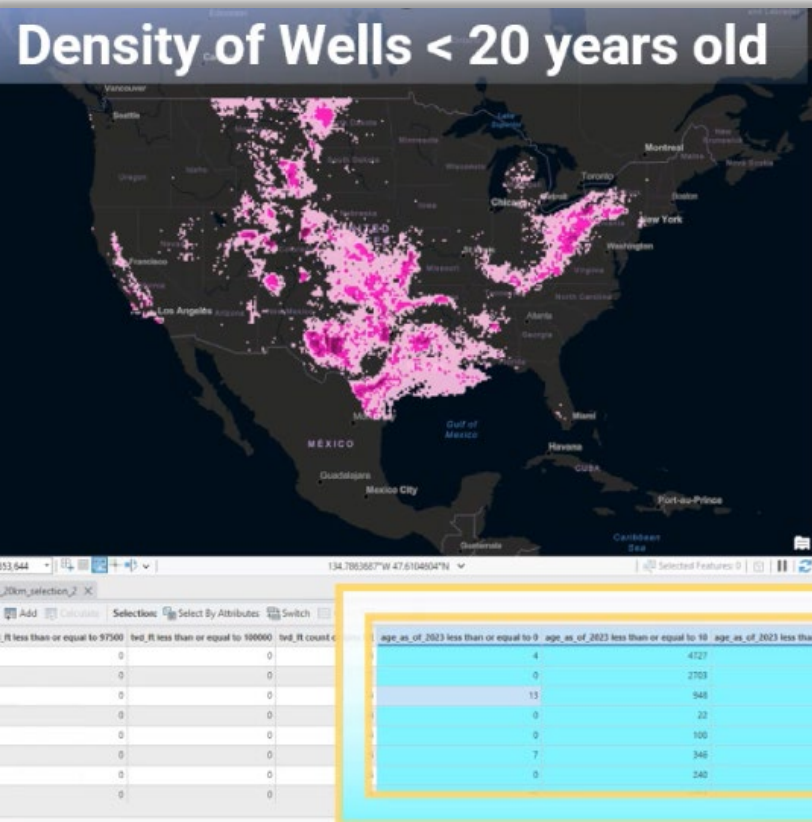

- Updates to U.S. features in NETL's award-winning **GOGI Database**

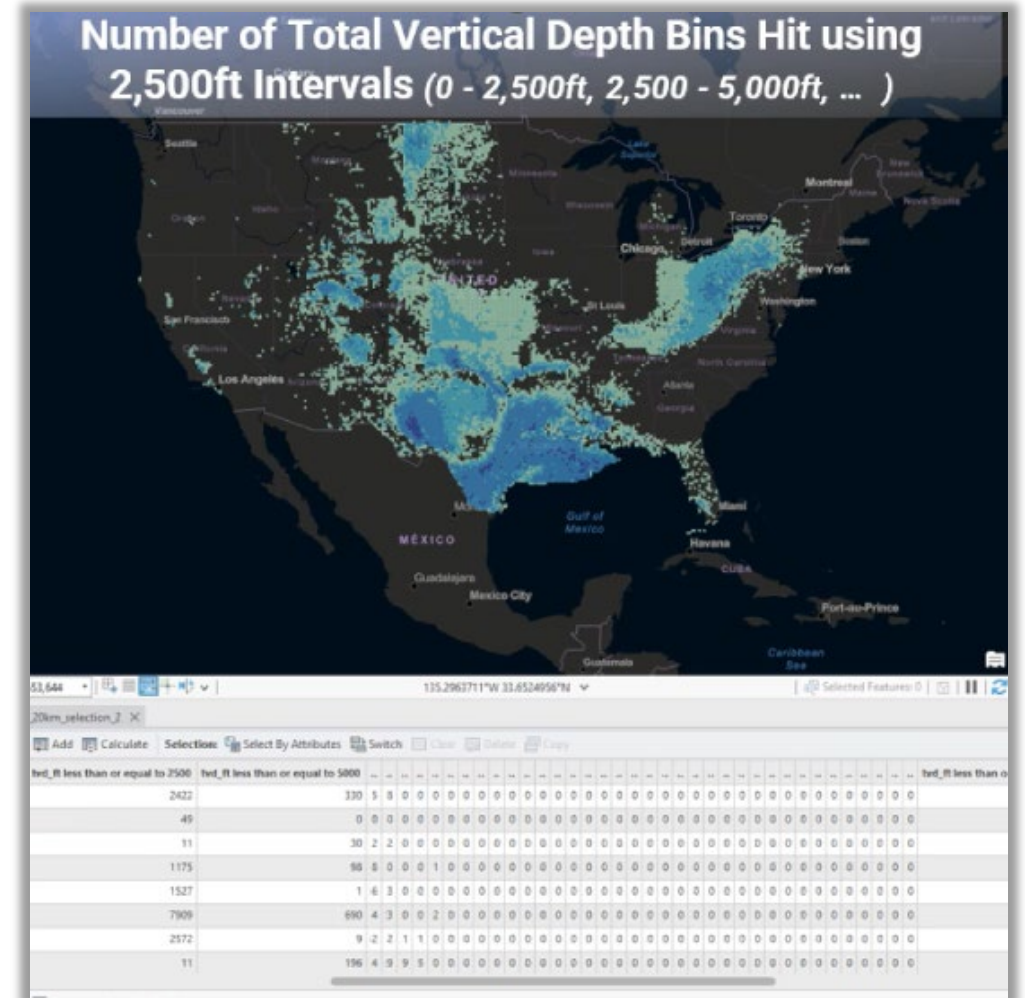

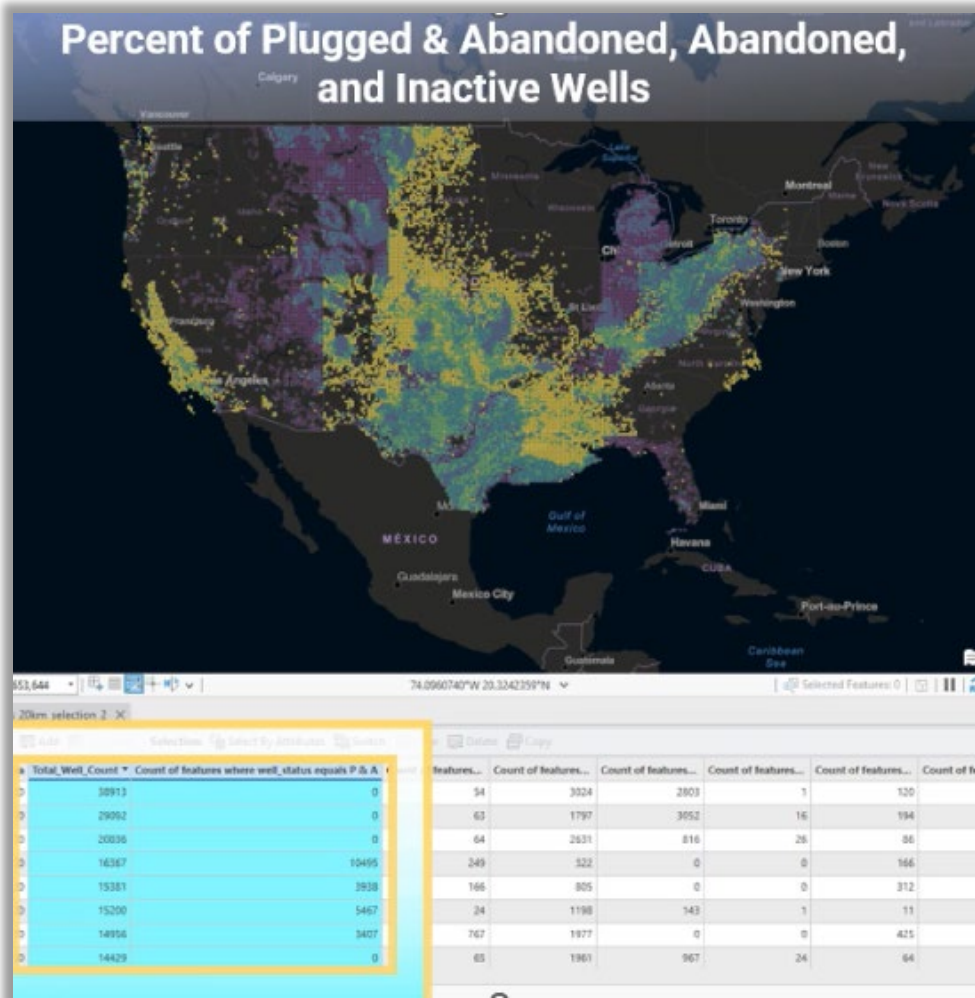

(Sabbatino et al. 2017)

- Transportation
- Facilities & Installation
- Production & Extraction

Sabbatino et al., 2017. **Global Oil & Gas Features Database**.
<https://edx.netl.doe.gov/dataset/global-oil-gas-features-database>. DOI: 10.18141/1427300

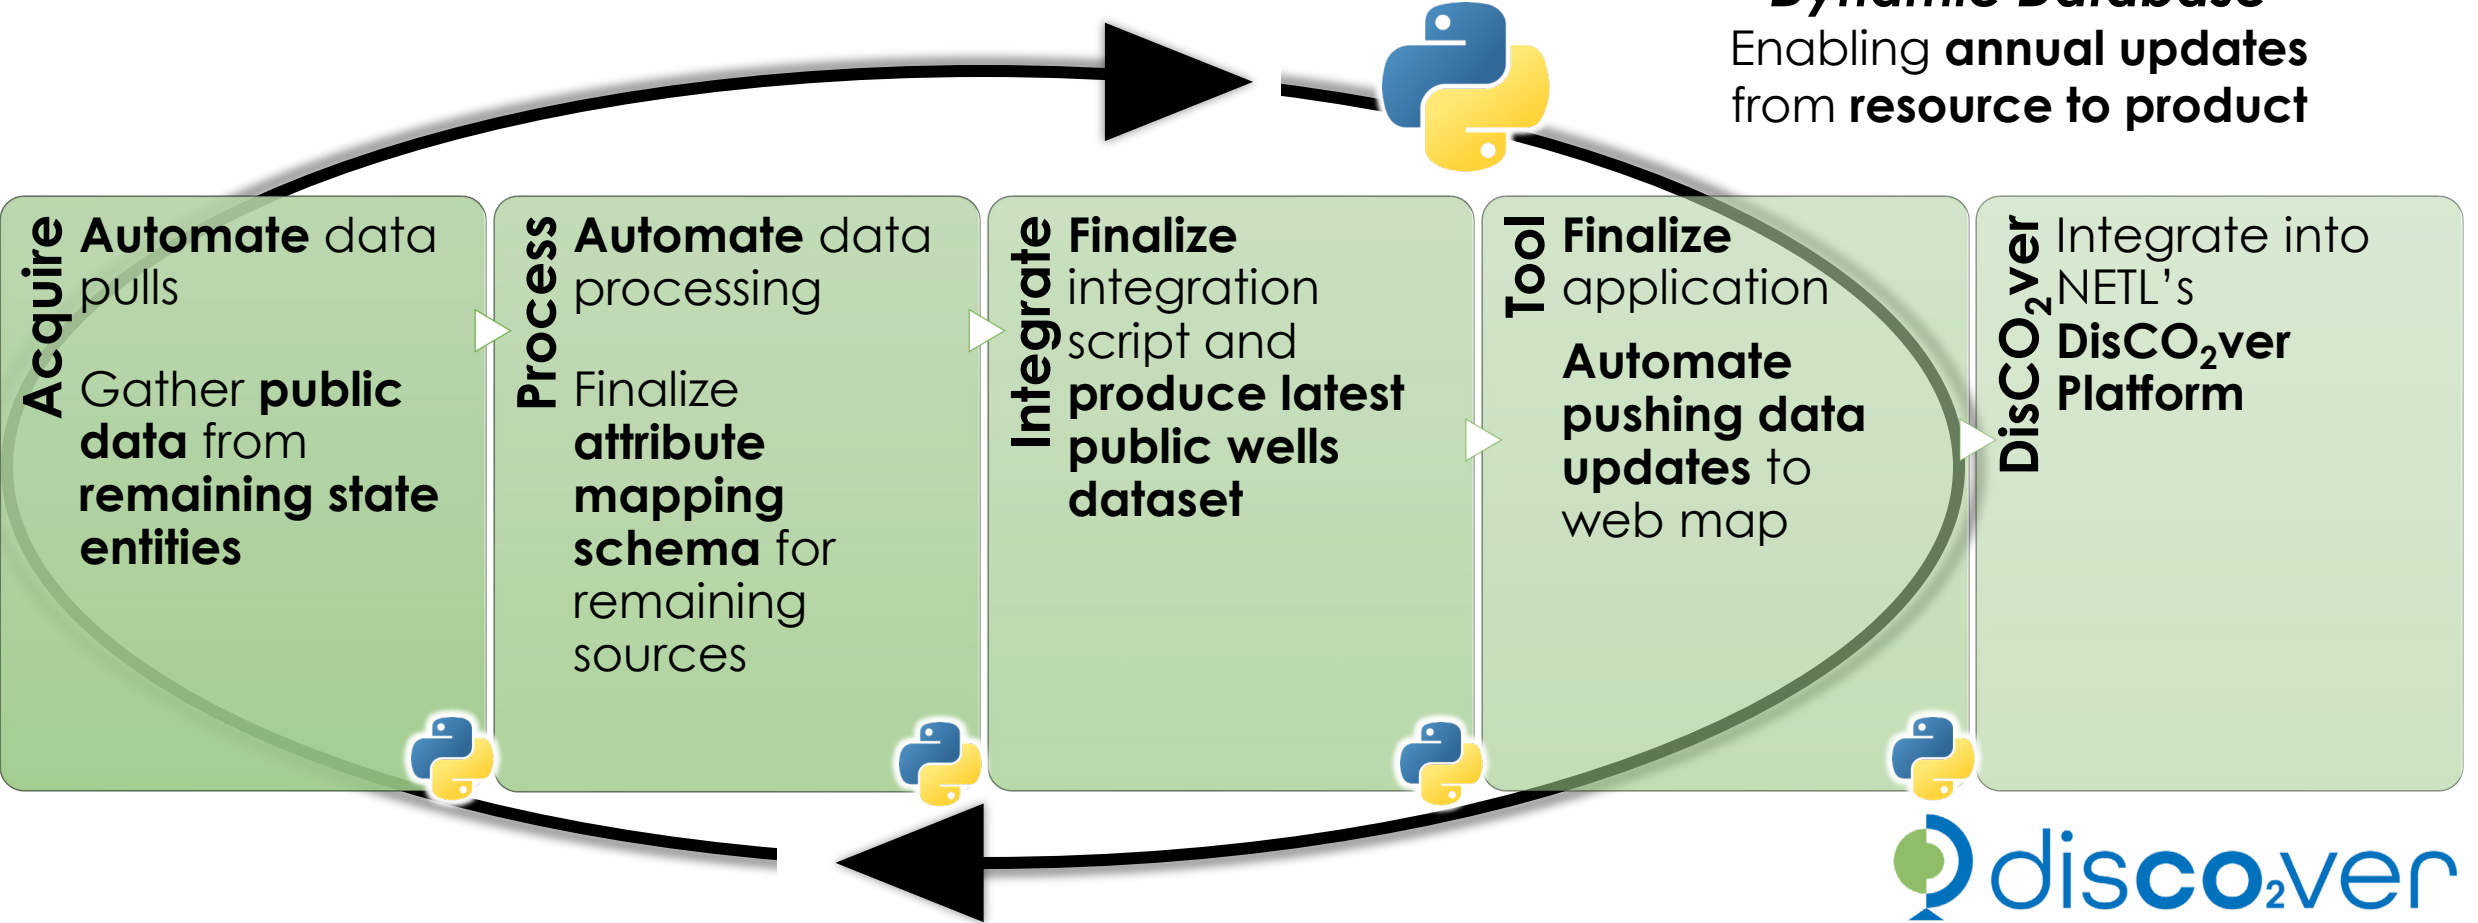

The Future of CO₂-Locate

Current Automation Efforts

Dynamic Database
Enabling **annual updates**
from **resource to product**

Expanding Resources

Current CO₂-Locate Database Efforts

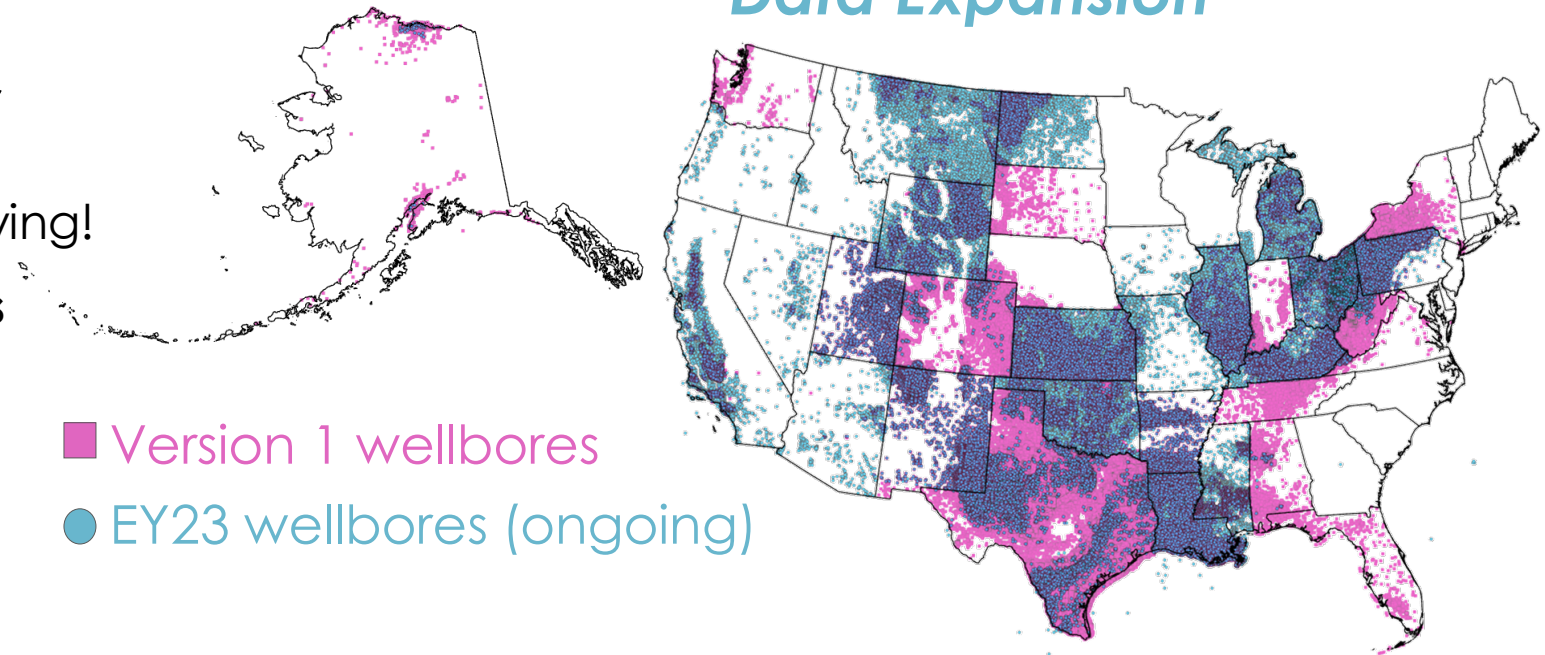

Acquiring & processing public resources from **more** state, tribal, and federal entities

- **30+ additional resources** and growing!
- **3.5+ million additional well records**

Expanding **analytical summary layers**

- **4.6+ million wells** (IHS, 2015)
- Summarizing additional **well characteristics**
- Developing **redundancy handling** method

EY23 Public Wellbore Record Data Expansion

Currently contains 7+ million public well records

800+ attributes identified & integrated

Class II Well Reuse Methodology & Tool

A Cross-Cutting Effort

Problem: *Currently unknown if Class II wells are candidates to be reused for CS.*

Solution:

- Develop a technically-informed method to rank Class II wells for reuse
- Evaluate well characteristics and proximity to potential hazards
- Leverage CO₂-Locate database & methodology derived insights to support tool development

Values Delivered:

- Publish a standardized method to review existing Class II wells and characterize safe CS reuse potential
- Provide stakeholders critical information that can help ensure efficient evaluation of Class II wells for CS

*Stakeholders include researchers, industry, regulators

Leverages NETL Technology & Resources:

- No total depth record
- 1-1000 meters
- 1001-2000 meters
- 2001-4000 meters
- 4001-6000 meters
- 6001-8000 meters
- >8000 meters

Glosser, D., Rose, K., and J. R. Bauer, 2016. Spatio-Temporal Analysis to Constrain Uncertainty in Wellbore Datasets: An Adaptable Analytical Approach in Support of Science-Based Decision Making. Journal of Sustainable Energy Engineering, 3(4): 299-317.

Class II Well Reuse Methodology

Evaluating Adequate Wellbore Integrity as Defined by EPA

Class VI Rule

(76 FR 56982)

- Internal & External Mechanical Integrity

Relevant components:

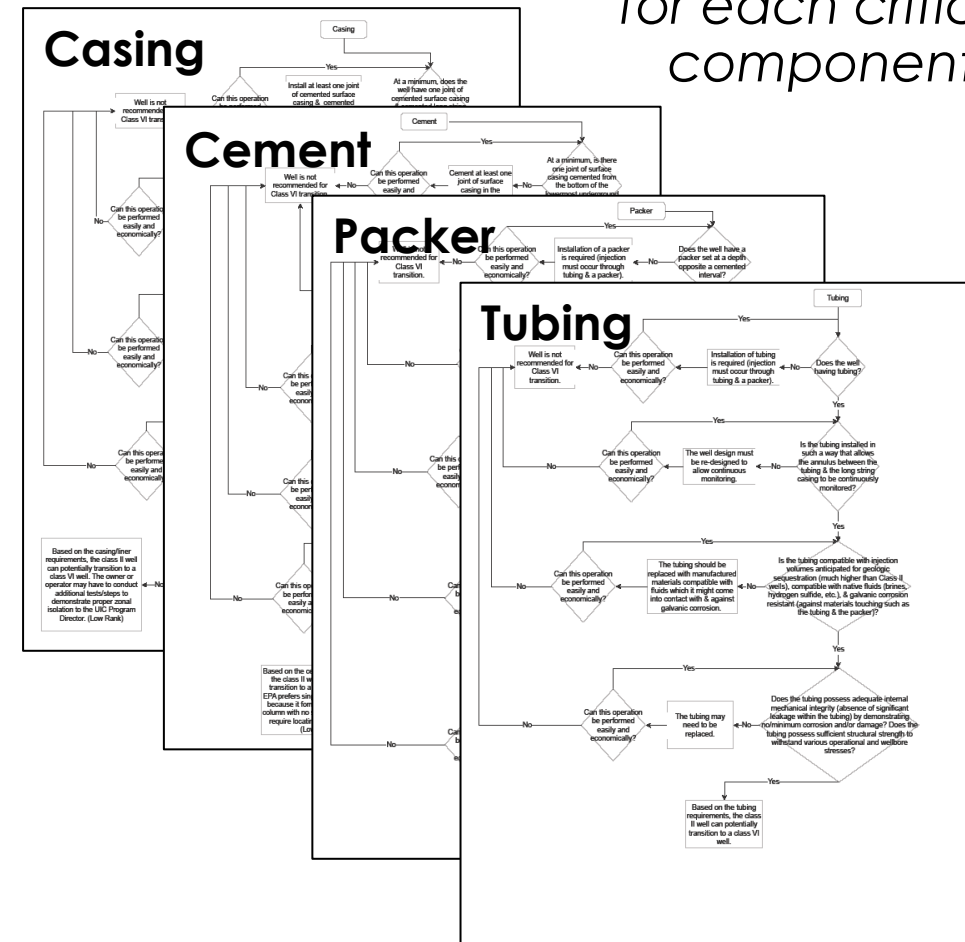

1. Casing
2. Tubing
3. Cement
4. Packer

Class VI Injection Well Schematic (EPA, 2012)

United States Environmental Protection Agency (EPA), (2012, May). Underground Injection Control (UIC) Program Class VI Well Construction Guidance. Geologic Sequestration of Carbon Dioxide. <https://www.epa.gov/sites/default/files/2015-07/documents/epa816r11020.pdf>

Developed workflows for each critical component

Applying Methodology with Well Data

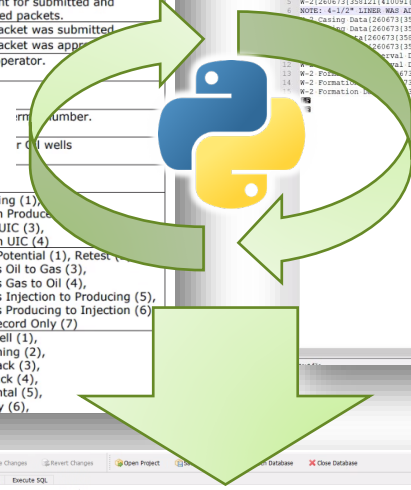

Acquisition & Standardization of Data

- Underground injection control (UIC) files for injection, disposal, storage, geothermal, and brine wells
- Digitized data into Completion Database (SQLite)
- Applying methodology to evaluate Texas wells
- Publishing results in upcoming manuscript (McElroy et al. in preparation)

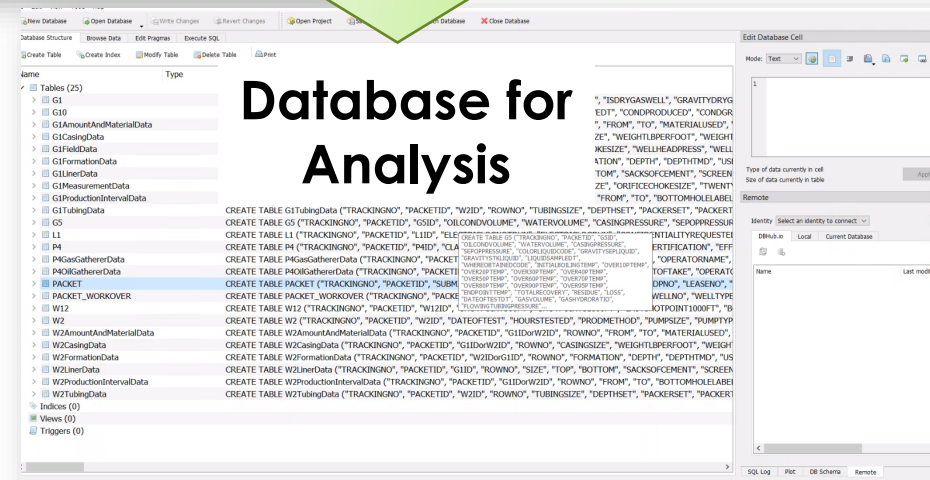

Packet Data		
Packet Data Column	Type	Definition
PACKET	String	Tag describing the contents of the line.
TRACKING_NO	Long Int.	Same for submitted and approved packets.
PACKET_ID	Long Int.	Different for submitted and approved packets.
SUBMIT_DT	MM/DD/YYYY	Date packet was submitted
APPROVED_DT	MM/DD/YYYY	Date packet was approved
OPERATOR_NO	6 Digit Integer	Filing operator.
API_NO	8 Digit Integer	Filing operator.
		Well number.
WELL_TYPE	Alphanumeric Integer	Producing (1), Shut-In Producing (2), Active UIC (3), Shut-In UIC (4)
PURPOSE_OF_FILING	Integer	Initial Potential (1), Retest (2), Reclass Oil to Gas (3), Reclass Gas to Oil (4), Reclass Injection to Producing (5), Reclass Producing to Injection (6), Well Record Only (7)
COMPLETION_TYPE	Integer	New Well (1), Deepening (2), Plug Back (3), Sidetrack (4), Horizontal (5), Reentry (6).

UIC Files

Database for Analysis

CO₂-Locate: Class II Well Reuse & Regional Evaluation Tool

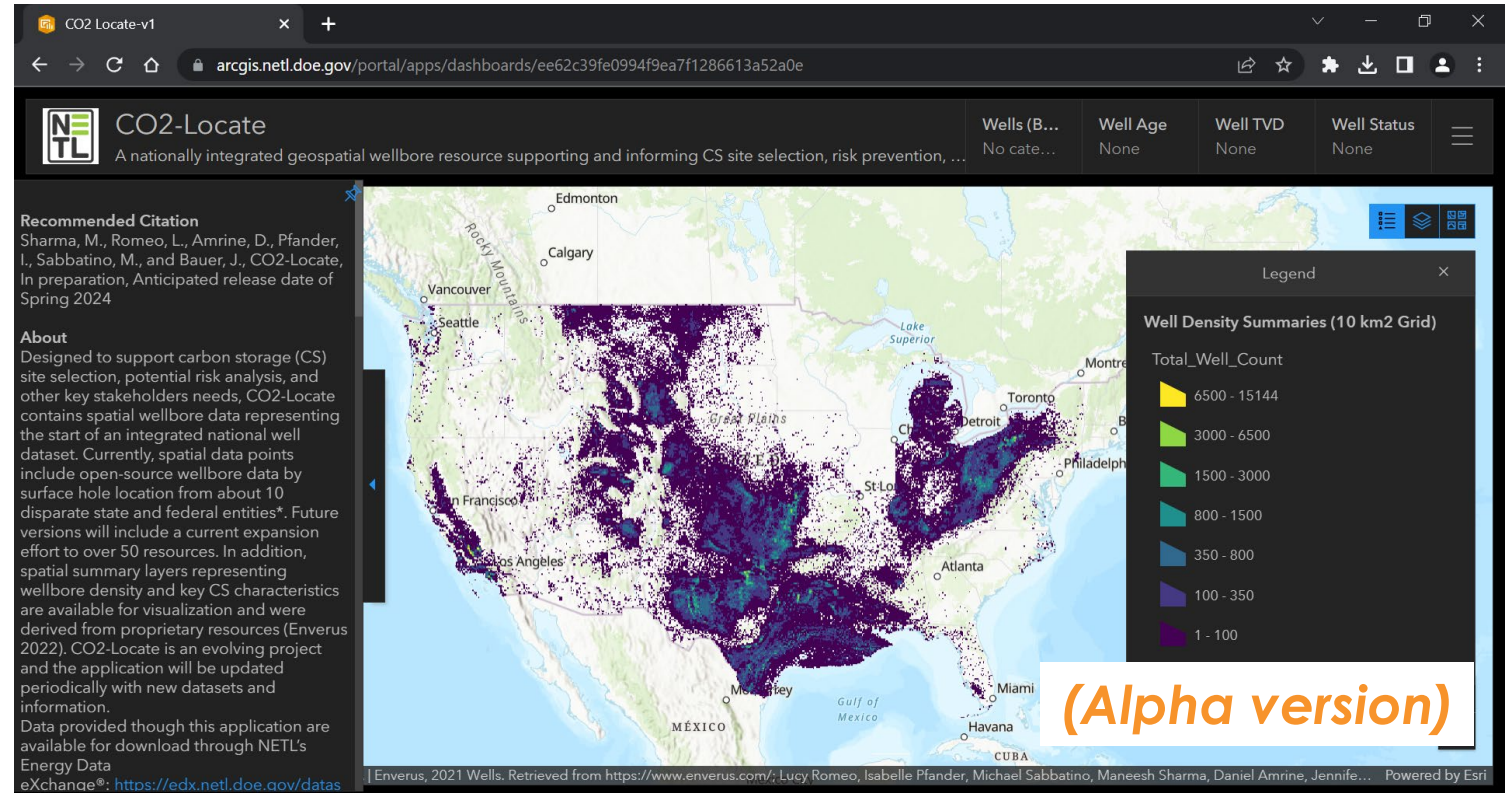

Access to & Visualization of Key Well Characteristics & Insights

- Currently contains **public well layer** & **analytical summary layers**

- **Expanding functionality**

- Adding **CO₂-Locate layers**
 - Integrating **reuse methodology** key characteristics
 - Enabling **on-the-fly queries**
 - Supporting **help documentation**
- Plugging into **DisCO₂ver Platform**

Stakeholder Benefit: Meets stakeholder requests of an integrated and up-to-date resource to support CCS R&D and offer critical insights for safe CS site selection and well reuse.

Next Steps & Opportunities

Research Products & Applications

Auto-update algorithms

- Anticipated completion January 2024

Publish CO₂-Locate Database (v2)

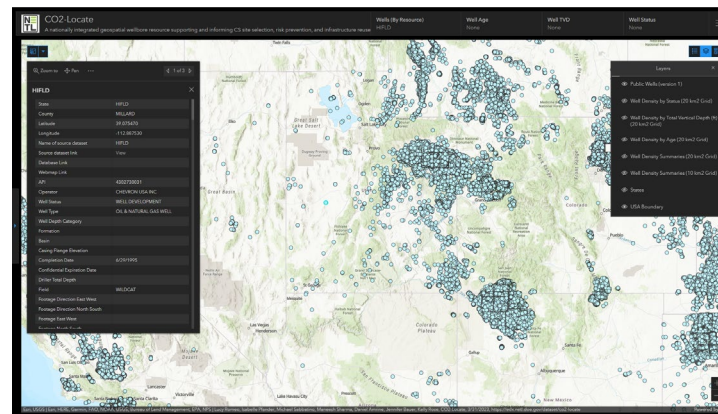

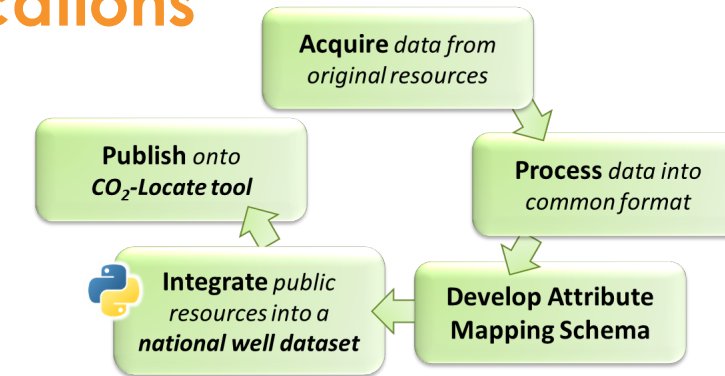

- Anticipated completion March 2024

Submit Class II Well Reuse Methodology for Publication

- Anticipated completion March 2024

Release CO₂-Locate Tool (beta)

- Anticipated completion March 2024
- Supporting **Class II Well Reuse & Regional Evaluations**

Opportunities

- Utilize integration method to produce databases

- Update **geoWELL** using sources found in CO₂-Locate

- Apply NETL's **Advanced Infrastructure Integrity Models** to perform integrity assessments

Join us Tuesday evening for live Tool Demos!

When: 5:45 - 7:45 p.m.

Where: The Ballroom Foyer and East/West Atriums

What:

- Environmental Justice and Social Justice for CS Systems
- The international offshore CS and web-database and tool
- RokBase, Virtualizing CS Rock Property Data platform
- Class VI Data Support Tool for regulatory requirements
- CO₂ Pipeline Routing Smart Tool
- **Co₂Locate - Class II Well Reuse and Regional Evaluation Tool**
- Carbon Storage Planning Framework Dashboard
- 3D Data Viewer and Preview Capability
- AIIM Model, Assessing Infrastructure Reuse Potential for CS
- EDX disCO₂ver, a one-stop tool for CO₂ digital resources

In demo "theater room"  support team will offer in person demos & Q&A

Acknowledgments

This work was performed in support of the U.S. Department of Energy's Fossil Energy and Carbon Management's Geo-Analysis and Monitoring Team and was developed jointly through the U.S. DOE Office of Fossil Energy and Carbon Management's EDX4CCS Project, in part, from the Bipartisan Infrastructure Law.
