U.S. DOE's National Risk Assessment Partnership

Presentations from Tuesday's Poster & Demo Session

Tool Demonstrations

ORION Induced Seismicity Module (Chris Sherman)

NRAP-Open-IAM: Open-Source Integrated Assessment Model (Veronika Vasylykivska)

Risk-Based Adaptive Monitoring Plan (RAMP) Tool (Xianjin Yang)

SoSAT Tool (Jeff Burghardt)

Tool Demonstrations

| | |
|-------------------|---|
| Mehana, Mohamed | The Transition from Class II to Class VI Operations: Assessing CO ₂ Storage and Risk |
| Chen, Bailian | Incorporating feedback between risk assessment and monitoring strategies: Optimizing detection and minimizing risk |
| Guglielmi, Yves | Mechanisms of permeability and friction evolution in faults affecting reservoir-caprock systems: Towards the development of an earthquake cycle ROM including fluid pressure and flow |
| Bhuvankar, Pramod | Estimating the CO ₂ leakage rate during well blowouts in underground CO ₂ |
| Kroll, Kayla | High-Fidelity Simulation of Induced Earthquakes Inform Operational Management Strategies |
| Geffers, et al. | Introducing Spatial Heterogeneity in Seismic Forecasts in ORION |
| Warner, Travis | A Framework for Linking Quantitatively Assessed Risks and Costs for Geological Carbon Storage (GCS) to Consider Impact of Contingency Plans at a GCS Site |
| Lackey, Greg | Linking basin-scale geologic modeling, well integrity characterization, and dynamic storage simulation to NRAP's quantitative risk assessment framework |
| Liu, Gouxiong | Class II to Class VI Operations – Insights from Simulation-Based Investigation of a CO ₂ -EOR to Dedicated Storage Scenario |
| Brown, Chris | Application of NRAP Risk Assessment Tools in the Context of the Bowtie Risk Management Framework |
| Baek, Seunghwan | A Modular Multi-Segmented Model for Wellbore Leakage Assessment and Site-Specific Risk Evaluation in Geological Carbon Sequestration |
| Appriou, Delphine | New Recommendations for Assessing Geomechanical Risk at GCS Sites |
| Rasouli, Pejman | Decision Support for Aquifer Impact Remedial Response of CO ₂ and Brine Leakage |

NRAP Phase III Technical Tasks (Leads)

Task 2.0: Addressing Stakeholder Needs to Accelerate Geologic Storage Projects: **Tools and Methods to Assess and Manage Subsurface Risks** in Site Development and Reuse Scenarios (Mohamed Mehana, LANL)

Task 3.0: **Induced Seismicity Risk Management** (Kayla Kroll, LLNL)

Task 4.0: **Adaptive, Risk-Based Monitoring Design** for Risk Management (Erika Gasperikova, LBNL)

Task 5.0: Quantitative Assessment of **Long-Term Liability**, and Project-Wide Financial Risk Evolution (David Morgan, NETL)

Task 6.0: Assessing and Managing **Risks of Basin-Scale GCS** Deployment (Diana Bacon, PNNL)

Can we quantify how risks evolve over time?

(Benson, 2007)

Can we quantify how risks evolve over time?

Viswanathan et al., 2008;
Stauffer et al., 2008

(Benson, 2007)

NRAP approach for rapid prediction of whole-system risk performance

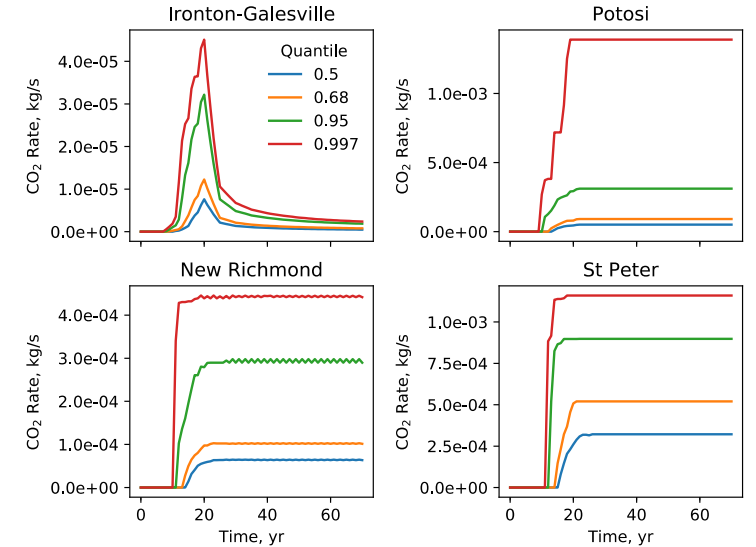

A. Divide system into discrete components

B. Develop detailed component models that are validated against lab/field data

C. Develop reduced-order models (ROMs) that rapidly reproduce component model predictions

D. Link ROMs via integrated assessment models (IAMs) to predict system performance

E. Exercise whole system model to explore risk performance

Evolving Focus of NRAP

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

NRAP Phase I Toolset (2016)

Evolving Focus of NRAP

- **Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification**
- **Phase II (2017–2022) - Risk Management and Uncertainty Reduction**
- **Phase III (2022 – 2027) – Supporting CCS deployment.**

How does the storage formation respond as a function of geology and injection choices?

Bromhal et al., 2015

Evolving Focus of NRAP

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

How does the storage formation respond as a function of geology and injection choices?

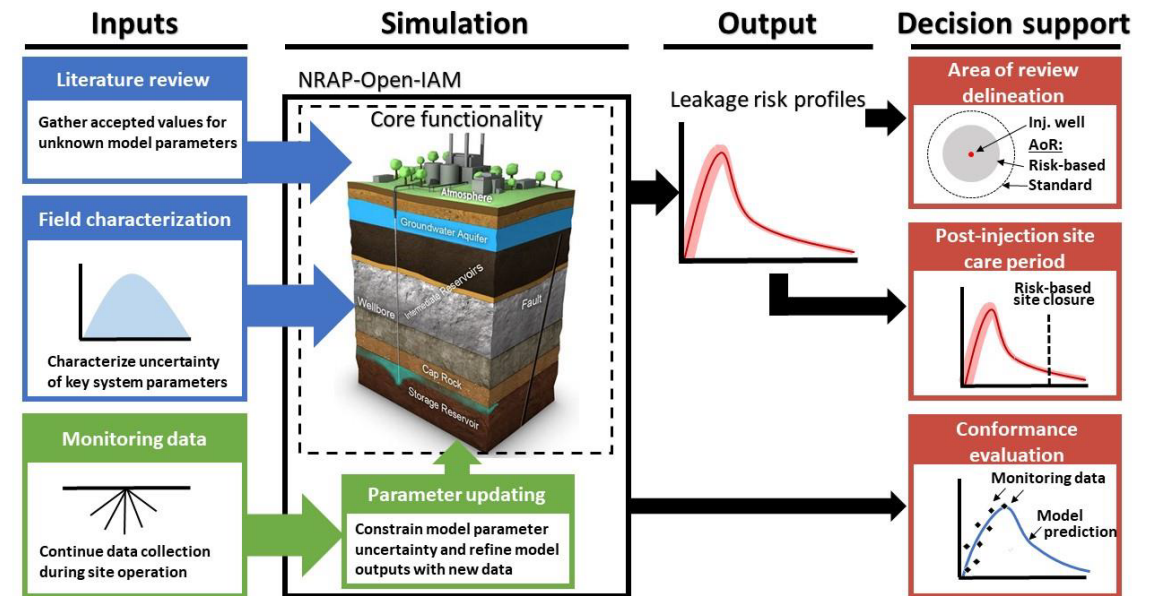

Bromhal et al., 2015

Evolving Focus of NRAP

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

Open Source Tools

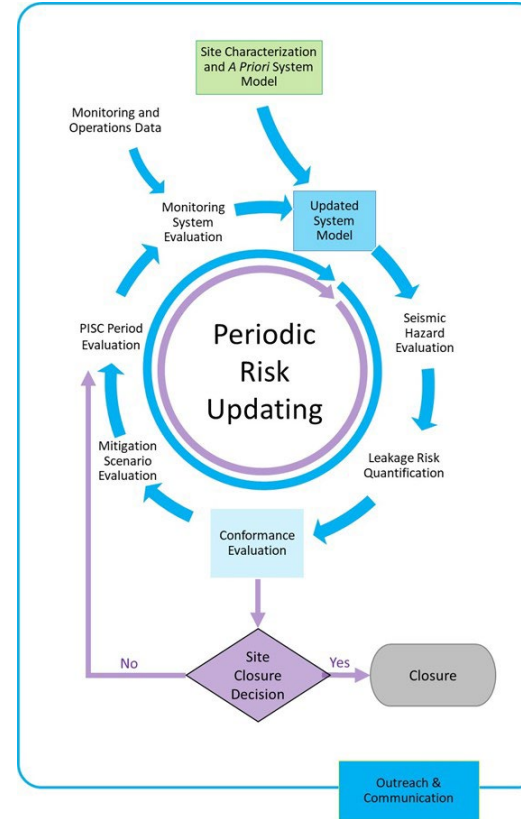

Evolving Focus of NRAP

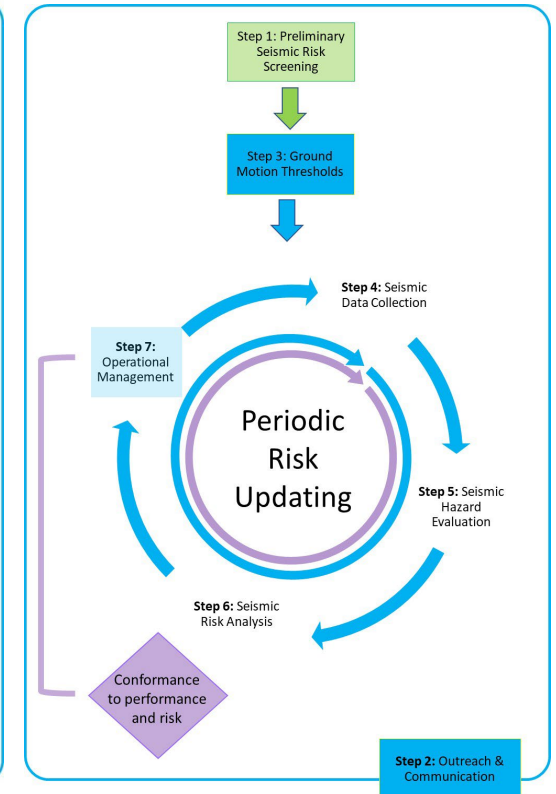

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

Recommended Practices

Containment Assurance & Leakage Risk Management

Induced Seismicity Risk Management

NRAP Phase II (2017 – 2022), cont.

Containment Assurance & Leakage Risk Management

Induced Seismicity Risk Management

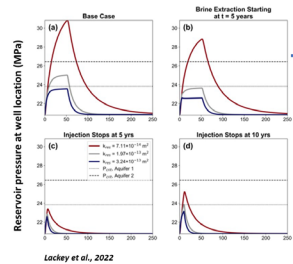

Monitoring design optimization

Risk-Based Post-Injection Site Care Duration

Evaluating Mitigation Alternatives

Plume Conformance

NRAP has developed recommended practices for risk-based leakage risk and containment assurance (Thomas et al., forthcoming), comprising workflows that address various aspects of geologic carbon storage site selection, permitting, and risk management. Case studies demonstrating these workflows are summarized in an application catalog (Huerta et al., 2021)

Determining Risk-based AoR

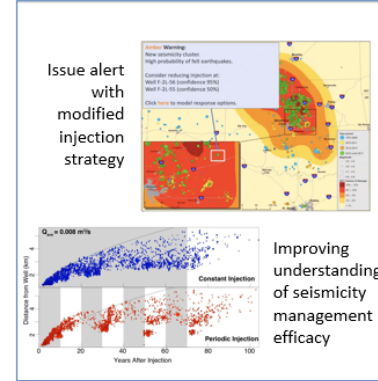

Leakage Risk Quantification

Induced Seismicity Risk Management

Operational Management Strategies

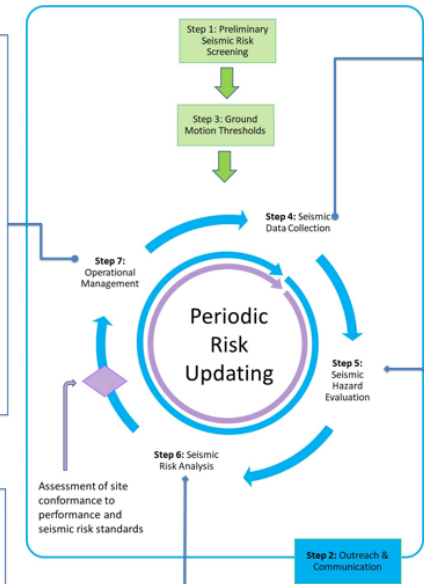

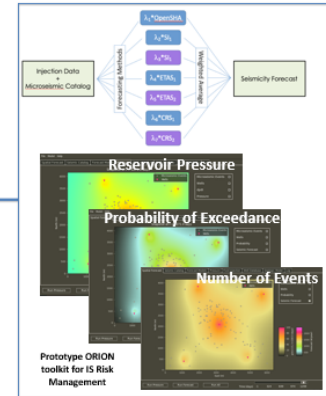

Seismic Risk Assessment

State-of-Stress & Geomechanical Risk Assessment

Quantifying hazard of induced seismicity events

[NRAP Application Catalog - Groups - EDX \(doe.gov\)](https://www.edx.org/course/nrap-application-catalog)

Evolving Focus of NRAP

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

Stakeholder Engagement

Welcome!!

National Risk Assessment Partnership Workshop:

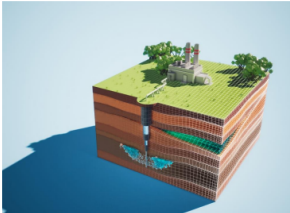

NRAP Tools for Geologic Carbon Storage Risk-Based Decision Making

Held in Conjunction with the Ground Water Protection Council 2021 Annual Forum

September 29, 2021

NRAP Workshops at GWPC Conferences

Rules and Tools Crosswalk: A Compendium of Computational Tools to Support Geologic Carbon Storage Environmentally Protective UIC Class VI Permitting

31 May 2022

Office of Fossil Energy and Carbon Management
NRAP-TRS-I-001-2022
DOE/NETL-2022/3731
EPA-900-B-22-001

DOE Carbon Transport and Storage Vision

Scaling Commercial Injectivity and Access to Storage Capacity

Decarbonization goals require accelerated development of storage and transport infrastructure
→ **20X scale up by 2030**

Evolving Focus of NRAP

- Phase I (2010–2016) - Risk Assessment and Uncertainty Quantification
- Phase II (2017–2022) - Risk Management and Uncertainty Reduction
- Phase III (2022 – 2027) – Supporting CCS deployment.

Maturing practical, useable tools and methods to quantitatively **assess and manage risks and liability** for geologic carbon storage at **site and basin scales**, and **promoting their application** for permitting and risk-related decision support to enable GCS commercial deployment.

Delivering methods and computational tools to:

- Support permitting for environmentally protective storage (containment assurance/leakage risk)
- Assess and manage induced seismicity risk
- Design adaptive, risk-based monitoring networks
- **Inform liability assessment and investment decisions**
- **Inform risk management for basin-scale deployment**

NRAP Toolset (As of: 8/31/2023)

Currently available
Forthcoming

Potential Leakage Risk and Containment Assurance

- NRAP-Open-Source Integrated Assessment Model (**NRAP-Open-IAM v2.7.2 α**)
- NRAP Basin-scale-Open-IAM

Induced Seismicity and State of Stress

- Operational Forecasting of Induced Seismicity toolkit (**ORION v0.5.1**) – induced seismic risk assessment
- State of Stress Analysis Tool (**SOSAT v3.1**)

Monitoring Design

- Risk-Based Adaptive Monitoring Plan (**RAMP**)
- Designs for Risk Evaluation and Management (**DREAM v3**) – monitoring design and optimization
- Passive Seismic Monitoring Tool (**PSMT v1.0**)

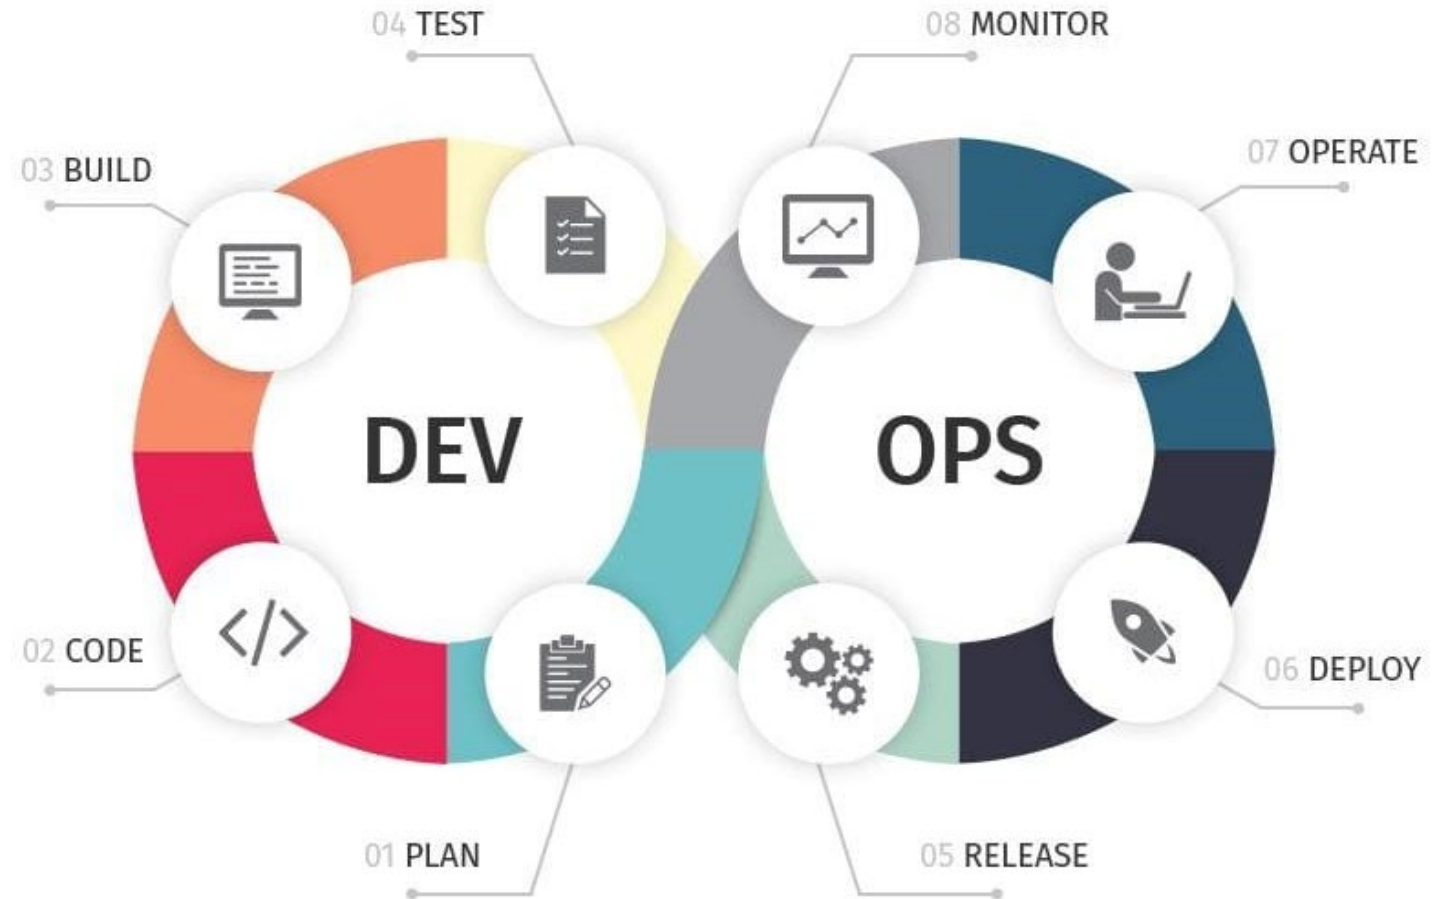

Linking Cost Modeling and Risk Assessment

- Python version of FECM/NETL CO2 Saline Storage Cost Model (CO2_S_COM_py) with remedial response

21

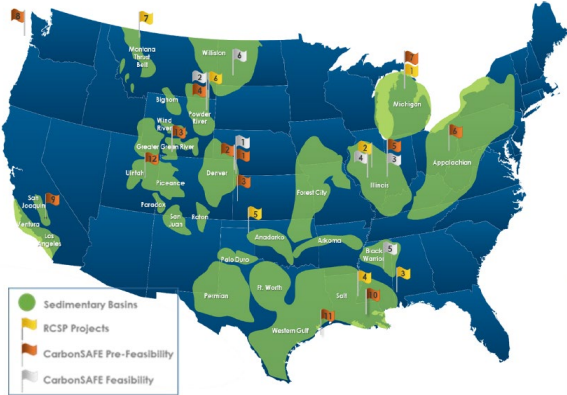

Stakeholder engagement to improve value and impact

- Are we addressing the right questions?
- Is the approach credible and understandable?
- Are the tools useful and useable?

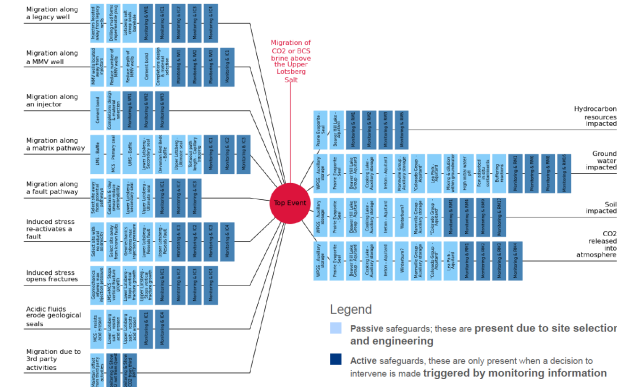

Part of an integrated strategy to enable CCS deployment
